Growth period of plants

# Part 03

Flowering period of plants

# Part 04

Fruiting period of plants

---

Through various pollination methods, pollen grains land on the stigma of the pistil. The pollen stimulates the stigma to grow a pollen tube, which carries the male gametes to extend into the ovule for fertilization. After fertilization, the egg cell begins to develop. Over time, the ovule and related flower parts gradually form fruits.

# Part 05

Withering period of plants
